

1st Call for neuroXRehab short-term scientific missions (STSMs)

We announce our first call for applications for the neuroXRehab Short-Term Scientific Missions (STSM) for implementation from November 2025 to October 2026.

The purpose of an STSM is to enable Action participants to gain professional experience in other countries than the one in which they currently reside. This facilitates the international mobility of researchers, especially early-career scientists and innovators, fostering new collaborations and sharing knowledge across borders. Award winners of the neuroXRehab STSMs receive funding for visits to host organisations in other countries to gain new knowledge or access to equipment or techniques not available in the home institution.

Applicants must have an e-COST profile, and applications must be submitted online in e-COST. Applications must describe goals and clearly detail the work to be carried out by the applicant during the STSM, present the expected results (outcomes) and give a description of how the STSM contributes to the objectives of the neuroXRehab COST Action.

There is no specific deadline for applications.

More information is available in our website <https://neuroxrehab.com/>
